EXPERIENCE

BUZZ & BEYOND (vling)
DevOps Engineer Intern / Infra · Platform · AX

Jan 2026 - Present
Seoul, South Korea

- Built a secure GitOps CI/CD workflow by deploying Atlantis on Kubernetes via Helm Chart, enforcing PR-based infrastructure changes with code review approval and achieving 100% audit trail for all Terraform operations
- Designed an AWS AssumeRole architecture to enforce least-privilege access at deploy time, revoking 100% of developer local AWS Access Keys and eliminating credential theft risks
- Discovered and fixed a bug in Atlantis open source (runAutoplan() missing FetchPullStatus()), contributing PR #6186 merged into Atlantis v0.41.0
- Built an LLM-based task auto-classification system using Gemini 2.5 Flash, achieving 91.7% accuracy across 500+ daily tasks (13 work types, 14 meeting types), eliminating human error and enabling quantitative Workload tracking per team member
- Designed a DORA Metrics auto-calculation dashboard by consolidating scattered Notion DB data, computing 4 key metrics (Deploy Frequency, Lead Time, Change Fail Rate, MTTR) with 7/30/90-day sliding windows, and correcting for actual business days via FLEX API integration

AWS Cloud Club at Dongguk
Member → Captain (May 2026~)

Jul 2025 - Present
Amazon Web Services (AWS)

CSDC Lab, Dongguk University
Undergraduate Research Assistant / Computer Security & Distributed Computing Lab

Apr 2025 - Present
Seoul, South Korea

- Conducting research on Network Security and Load Balancing
- NLP-based IaC Security Analyzer — Developed a semantic security analysis tool using BERT to detect Terraform anomalies and visualize IAM privilege escalation paths via NetworkX graph algorithms
- SpinKube & WASM IoT Log Processing Simulation — Validated WebAssembly infrastructure for high-throughput IoT environments using SpinKube on Kubernetes

PROJECTS

NanoGrid Plus — Hybrid FaaS Platform (SoftBank Hackathon Final)
Infrastructure Lead

Dec 2025
GitHub

- Architected a self-hosted FaaS platform on AWS EC2, achieving 30x Cold Start improvement (3s → 0.2s) via Docker Warm Pool (Pause/Unpause) and up to 96% cost reduction through real-time Auto-Tuner memory analysis
- Implemented full Data Plane: SQS Long Polling task queue, S3 code storage, Redis Pub/Sub result delivery, CloudWatch Custom Metrics auto-reporting, and MDC-based requestId logging for complete traceability

Roomeya — Serverless Dormitory Matching Platform
Cloud Architect

Sep 2025 - Dec 2025
GitHub

- Designed a full serverless AWS architecture with Terraform IaC: 9 Lambda functions, Step Functions matching workflow, 4 DynamoDB tables, API Gateway HTTP API v2, Cognito OAuth 2.0, and SES email — achieving scale-to-zero with zero off-season idle cost

Deploy Land — Gamified CI/CD Platform
AWS Architect & Developer

Sep 2025
GitHub

- Designed a serverless CI/CD platform automating GitHub Push → Build → Deploy → Health Check, with gamified real-time monitoring via AWS Amplify, Discord/Slack instant notifications, and phantom deploy prevention through config validation

Cloud Infrastructure Modernization (CAPS Club)

Mar 2022 - Sep 2022

Cloud Architect

- Migrated on-premise physical PC infrastructure to AWS Cloud (EC2, EBS, S3, RDS, Docker), achieving 24/7 service availability and eliminating physical dependency

OPEN SOURCE CONTRIBUTIONS

Atlantis — PR #6186 Merged (v0.41.0)

Mar 2026

github.com/runatlantis/atlantis/pull/6186

- Fixed autoplan bug where FetchPullStatus() was never called, causing IsMergeable to always be false (Go zero value) and blocking all clean PRs when plan_requirements: [mergeable] was set

Spin Framework Python SDK — PR #124, #126, #128

Dec 2025 - Present

github.com/spinframework/spin-python-sdk

- Contributed 3 PRs and 3 Issues to improve the Python SDK for building serverless WebAssembly applications with the Spin Framework

EDUCATION

Dongguk University

Mar 2021 - Feb 2027 (Expected)

*B.S. in Computer Science Engineering, College of Engineering**Seoul, South Korea | GPA: 4.12*

- Dean's List (Semester Honors) — 4 times (2021.07, 2022.01, 2022.01, 2025.07)

SKILLS

(Cloud & Infra) AWS (EC2, SQS, S3, RDS, Lambda, Step Functions, IAM, WAF, ElastiCache, EventBridge, CodePipeline), GCP, Azure, Terraform, Kubernetes, Docker, Helm

(DevOps & Automation) Atlantis, Argo Workflows, Datadog, Grafana, GitOps, CI/CD

(Programming) Golang, Python, Java, SQL

(AI/ML & Security) BERT, Hugging Face, NetworkX, NLP, Gemini, WebAssembly, SpinKube

(Frameworks) Spring Boot, Apollo Federation, GraphQL

(Languages) Korean (Native), Japanese (Conversational)

CERTIFICATIONS

(Cloud) Google Cloud Fundamentals: Core Infrastructure | Oct 2025

(SQL) SQL Developer (SQLD) | Sep 2024 (Valid until Sep 2026)

(ICT) Craftsman Information Processing (정보처리기능사) | Dec 2022

AWARDS & ACHIEVEMENTS

U-LINC Adventure Design Competition — Encouragement Prize

Dec 2022

- Participated as Team Leader and won Encouragement Prize

SoftBank Hackathon 2025 — Finalist

Nov - Dec 2024

- Advanced to Final round with NanoGrid Plus project

ACTIVITIES

CAPS (Dongguk Univ.) — Vice President & Web Admin Lead (Mar 2022 - Sep 2023)

Cloud Club 1st Gen — Member (Mar 2022 - Sep 2023)

Amazon Cloud Club at Dongguk — Member → Captain (Jul 2025 - Present)

MILITARY SERVICE

Republic of Korea Army | Completed mandatory military service.
