SUMMARY

I am Ko Donghyeon, a DevOps Engineer. I moved Terraform and Kubernetes infrastructure onto a GitOps workflow where nothing changes without PR approval, and when a bug in Atlantis blocked that rollout I traced the cause instead of working around it and got the fix merged upstream (v0.41.0). I turned scattered internal work data into a productivity metric the whole organization sees, and I take on problems outside the engineering team as well, like the sales team's lead response, from on-site interviews through measurement and adoption.

SKILLS

(Cloud & Infra) AWS (EC2, SQS, S3, RDS, Lambda, Step Functions, IAM, WAF, ElastiCache, EventBridge, CodePipeline), GCP, Azure(AKS), Terraform, Kubernetes, Docker, Helm

(DevOps & Automation) Atlantis, Argo Workflows, Datadog, Grafana, GitOps, CI/CD, Notion

(Programming) Golang, Python, Java, SQL

(AI Dev Tools) Claude Code, Codex, Gemini, Notion Custom Agent, Obsidian, MCP

(AI/ML & Security) BERT, Hugging Face, NetworkX, NLP, Gemini, WebAssembly, SpinKube

(Frameworks) Spring Boot, Apollo Federation, GraphQL, Django, FastAPI, Node.js

(Languages) Korean (Native), English (Conversational), Japanese (Conversational)

EXPERIENCE

BUZZ & BEYOND (vling)

Jan 2026 - Present

DevOps Engineer / Infra, Platform, AX — *Seoul, South Korea*

- Built the company GitOps environment with Terraform and Atlantis
  - Deployed Atlantis on Kubernetes via Helm chart; PR-level approval gives every Terraform operation an audit trail, and since Jan 2026 every infrastructure change has gone through this path only
  - Cut AWS access over to least-privilege AssumeRole and revoked every local developer key
- Built an SLA system for inbound leads
  - Cut lead intake-to-owner assignment from 33.6h to 0.4h on average (98.7% faster); leads assigned to an owner within 1h rose from 9% to 86%
  - SLA measured on business hours only (weekends, holidays, after-hours excluded), with escalation for untouched leads
- Built the internal AX productivity metric system (DORA adopted as the measure)
  - Auto-classifies 200+ tasks per day (91.7% classification accuracy on internal review) to collect deploy and incident data; running daily since Feb 2026
  - Agreed and documented per-team deploy criteria as the fixed basis
- Built and ran internal Notion agents
  - Agent reviews deployment quality automatically and links release-related tasks, keeping the data consistent
  - Notion Workers turn calendar events into meeting notes, rolled out company-wide and in use since
  - Per-vendor (Vertex AI, AI Studio, OpenAI) LLM cost labeling; built the usage monitoring and alerting system

CSDC Lab, Dongguk University

Apr 2025 - Present

Undergraduate Research Assistant / Computer Security & Distributed Computing Lab — *Seoul, South Korea*

- NLP-based IaC Security Analyzer (GitHub ↗): built a semantic security analysis tool using BERT to detect Terraform anomalies and visualize IAM privilege escalation paths via NetworkX graph algorithms
- WebAssembly vs containers, empirical study (paper ↗): measured an IoT log pipeline on AKS across the Edge, Transform and Ingestion layers and derived layer-specific runtime allocation criteria with statistical testing. A preceding experiment migrating Python Wasm to Rust cut binary size 91x and raised throughput 7.8x

AWS Student Builder Group at Dongguk University

Jul 2025 - Present

Member (Jul 2025 - Apr 2026) → Group Leader (May 2026 - Present) — *Amazon Web Services (AWS)*

- As Group Leader, built a core-member team to run SNS channels and the on-campus community, and runs hands-on cloud sessions for students of all majors (session material, full lab dry-runs)
- Led Dongguk Dev Conference 2026 (2026.10.02): about 100 developers from Dongguk clubs including UMC, CAPS, GDGoC and Likelion; owned planning, operations and external speaker outreach
- Earned the AWS SBG Apex Badge; runs the LinkedIn group page ↗

Notion Campus Leader at Dongguk University

Aug 2026 - Present

Campus Leader — *Notion*

- Official Notion Campus Leader on campus, running Notion adoption sessions for students

OPEN SOURCE CONTRIBUTIONS

Atlantis: PR #6186 Merged (v0.41.0) Mar 2026

github.com/runatlantis/atlantis/pull/6186 ↗

- Fixed autoplan bug where FetchPullStatus() was never called, causing IsMergeable to always be false (Go zero value) and blocking all clean PRs when plan_requirements: [mergeable] was set

Spin Framework Python SDK: PR #124, #126, #128 Dec 2025

github.com/spinframework/spin-python-sdk ↗

- Contributed 3 merged PRs and 3 issues to the Spin Python SDK, the toolchain for running serverless WebAssembly workloads

PROJECTS

NanoGrid: Function Execution Platform Free of Managed FaaS Limits (SoftBank Hackathon Finalist) Dec 2025

Infrastructure & Security *GitHub ↗ | AWS Article ↗*

- Built a self-hosted FaaS platform on AWS EC2. A Docker warm pool (pause/unpause) cut cold start (3s → 0.2s), and a real-time memory auto-tuner sized per-function memory (analysis showed up to 96% over-allocation)
- Designed autoscaling from scratch: scaled on SQS queue depth instead of CPU so capacity reacts before load reaches the servers, and held instances stopped in an EC2 warm pool so the cost of two keeps five ready (10,000 requests in about 11 seconds).

Roomeya: Serverless Dormitory Matching Platform Sep 2025 - Dec 2025

Cloud Architect *GitHub ↗*

- Designed a full serverless AWS stack in Terraform: 9 Lambda functions, a Step Functions matching workflow, 4 DynamoDB tables, API Gateway HTTP API v2, Cognito, SES. Scale-to-zero cut idle cost to $0

Deploy Land: Gamified Serverless CI/CD Platform Sep 2025

Infra & Backend *GitHub ↗*

- Turned a log-only deploy screen into a game view where a character runs through the pipeline stages, sharing deploy status in real time. Tracked CodePipeline, CodeBuild and Elastic Beanstalk state via EventBridge → Lambda → DynamoDB into an Amplify monitoring app
- Terraform-managed infrastructure; post-deploy health checks block deploys that succeed in the pipeline but change nothing in production; Bedrock analyzes failure logs; instant Discord and Slack alerts

EDUCATION

Dongguk University Mar 2021 - Feb 2027 (Expected)

B.S. in Computer Science Engineering, College of Engineering *Seoul, South Korea | GPA: 4.09 / 4.5*

- Dean's List (Semester Honors), 4 times: 2021-1, 2021-2, 2022-1, 2025-1 semesters

CERTIFICATIONS

(AWS) AWS Certified Cloud Practitioner | Oct 2026, Credly ↗
(SQL) SQL Developer (SQLD) | Sep 2024
(ICT) Craftsman Information Processing (정보처리기능사) | Dec 2022
(Cloud) Google Cloud Fundamentals: Core Infrastructure | Oct 2025
(AWS) AWS SBG Apex Badge | Sep 2026, Issued by AWS Community
(Notion) Notion Badge | Jun 2026 (valid to Jun 2028), Essentials ↗, Workflows ↗, Advanced ↗

AWARDS & ACHIEVEMENTS

U-LINC Adventure Design Competition, Encouragement Prize, Dec 2022, Dongguk LINC 3.0 Director
Campus Study-Facility Occupancy Analysis System, Encouragement Prize, Dec 2022, Dongguk LINC 3.0 Director
Torch Award (횃불상), Aug 2023, ROK Army Information & Communication School
SoftBank Hackathon, Finalist, Dec 2025, NanoGrid

ACTIVITIES

CAPS (Dongguk Univ.), Vice President & Web Admin Lead (Mar 2022 - Dec 2022)
Cloud Club 1st Gen, 1st Member (Mar 2022 - Sep 2023), vendor-neutral inter-university cloud community

MILITARY SERVICE

Republic of Korea Army | Jun 2023 - Dec 2024, completed service
